Shop Kart Sales Analytics

Comprehensive analysis of 60,000 retail transactions to drive data-driven business decisions

Made with GAMMA

Project Overview

Objective

Analyze sales trends, customer behavior, profitable categories, and loss-making products to improve profitability

Dataset

60,000 records with 20+ columns including orders, products, customers, and financial metrics

Tools

Excel, Python, SQL, and Power BI for end-to-end data analysis and visualization

Made with GAMMA

Key Performance Metrics

36M

Total Profit

Overall profitability across all categories

324M

Total Revenue

Combined sales from all transactions

11.1%

Profit Margin

Percentage of revenue converted to profit

5,897

Loss Orders

Orders generating negative profit

Made with GAMMA

Category Performance Analysis

Profit Contribution

- Home: 41.8% of total profit
- Electronics: 41.4% of total profit
- Clothing: 16.8% of total profit

Revenue Generation

- Home: $111M in sales
- Electronics: $110M in sales
- Clothing: $102M in sales

Made with GAMMA

Loss Analysis Findings

9.8% Loss Orders

Nearly 10% of all transactions generate losses, requiring immediate pricing strategy review

Clothing Category Impact

5,193 loss orders in Clothing, contributing $1.2M in total losses - highest among all categories

Discount Correlation

Average discount of 17.9% on loss-making clothing items shows aggressive discounting reduces profitability

Made with GAMMA

Top Loss-Generating Products

1 **T-Shirt**

$305K in losses - requires immediate pricing review

2 **Jeans**

$304K in losses - supplier cost negotiation needed

3 **Jacket**

$303K in losses - optimize discount strategy

4 **Shirt**

$293K in losses - adjust pricing structure

These four clothing products account for $1.2M in total losses, representing 98.6% of all loss-making transactions

Strategic Recommendations

Seasonal Planning

Launch promotional campaigns during peak sales periods and optimize inventory before high-demand months

Pricing Strategy

Review pricing strategies and discount policies to reduce loss-making transactions, especially in Clothing category

Customer Retention

Implement loyalty programs and personalized promotions for high-value customers

Regional Focus

Expand marketing efforts in Maharashtra and Karnataka while strengthening distribution networks

Made with GAMMA

Conclusion

The Shop Kart Sales Analytics project successfully analyzed 60,000 retail transactions to identify key revenue drivers, loss-generating products, and high-value customers.

The Power BI dashboard provides interactive insights into sales trends, regional performance, and discount impact on profitability.

Key outcomes:

- Identified $36M total profit across categories
- Detected 5,897 loss-making orders
- Pinpointed Clothing category as primary loss source
- Highlighted top-performing cities and customers

These insights enable data-driven decisions to improve profitability, optimize pricing strategies, and strengthen customer engagement.
